

 **Sciteline** INSIGHTS

Empowering patients.
Transforming research.

About Sciteline Insights: A monthly roundup of new tools, real-world impacts, and key takeaways to help clinical teams work smarter and faster.

FEATURE SPOTLIGHT:
eSource

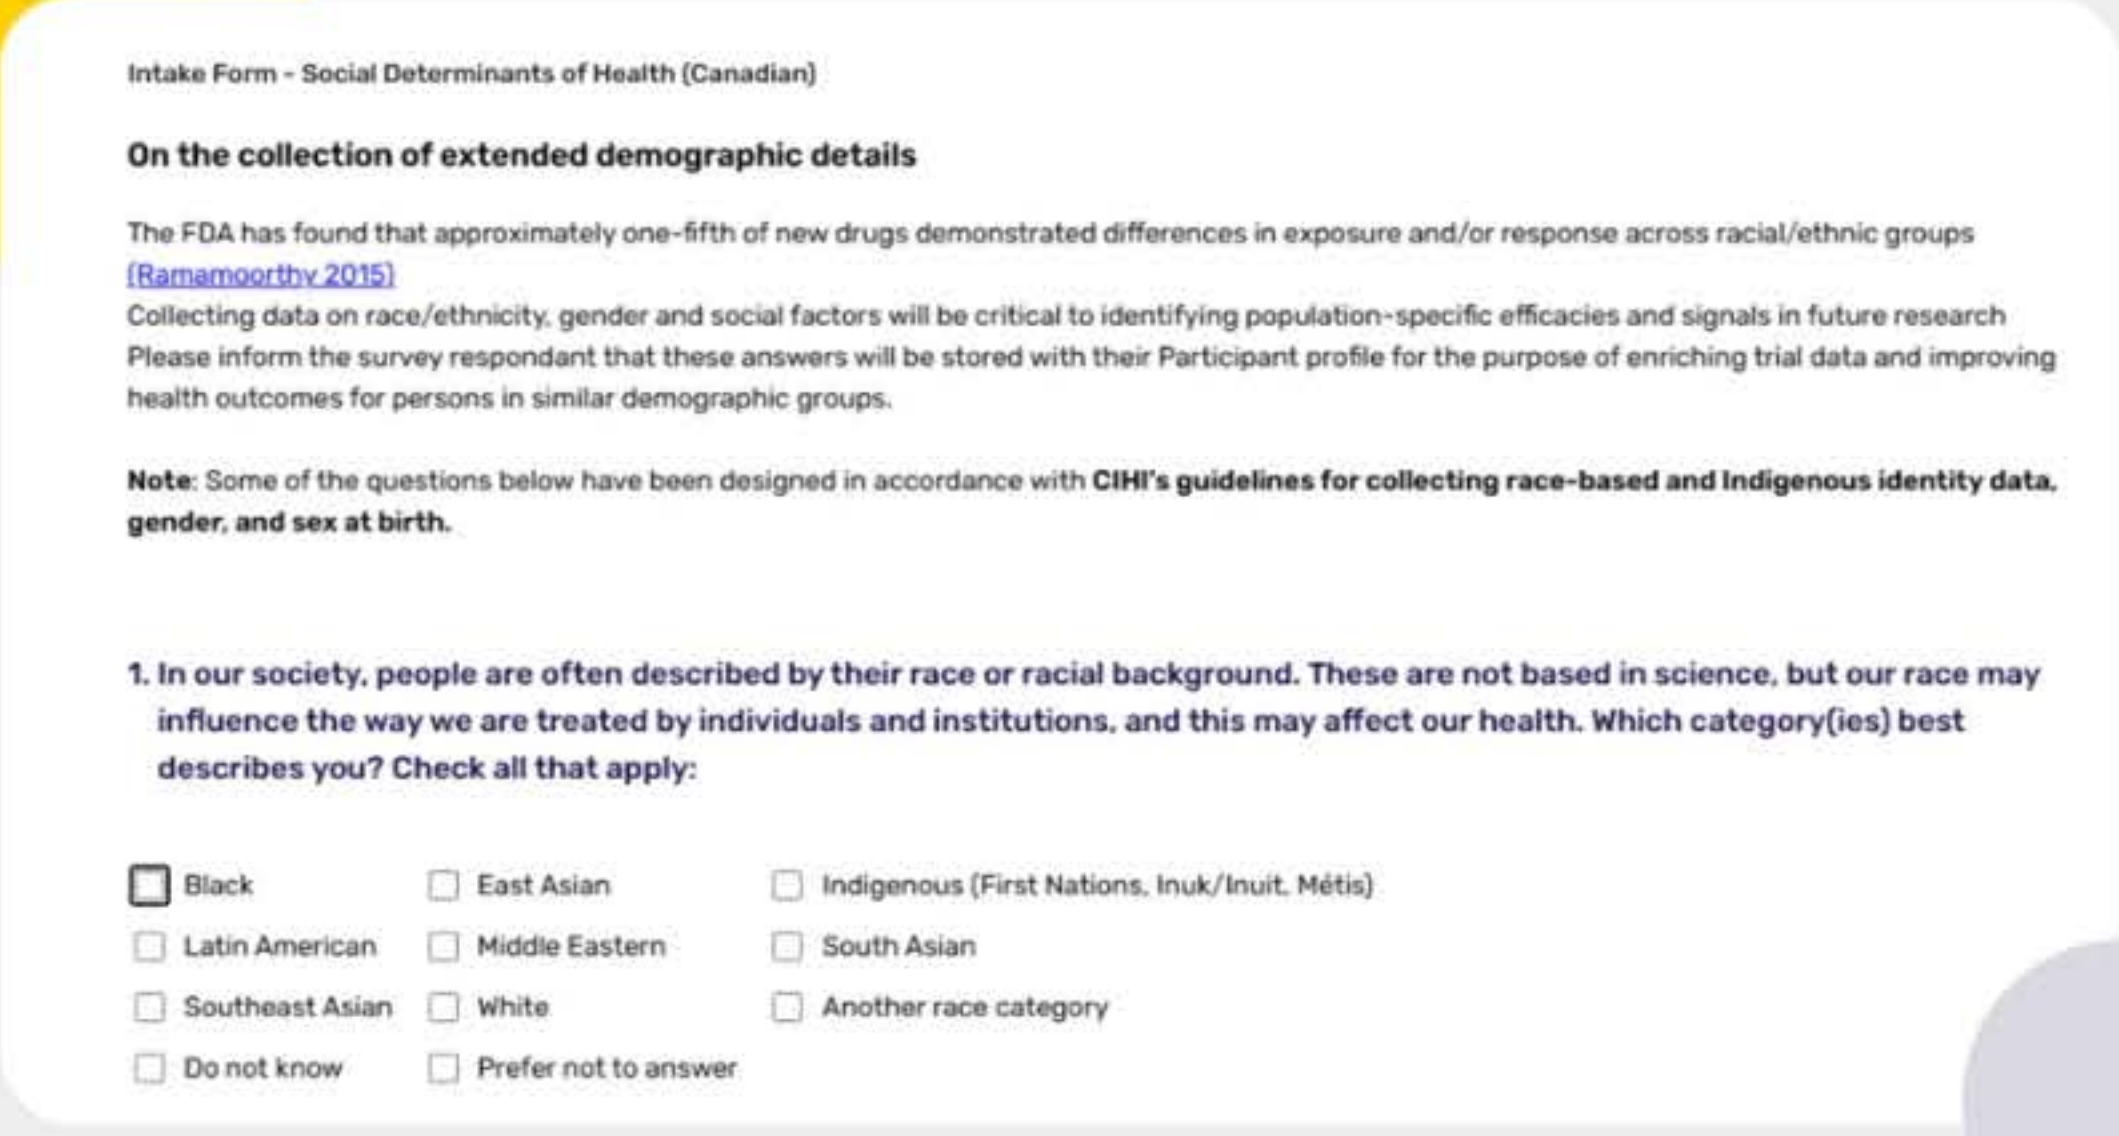

Clinical trials are built on data, but the way that data is captured can make or break a study's speed and quality.

eSource is the electronic capture of clinical trial data at its origin, eliminating paper forms and duplicate entry. Instead of recording data on paper and then transcribing it into a database, eSource captures it once, digitally and securely, with a full audit trail. The result: fewer errors, faster study timelines, and stronger compliance.

With Sciteline, eSource isn't just about going paperless. It's about giving research teams the tools to:

- Save time by reducing manual data entry and corrections
- Enable faster remote monitoring with real-time access
- Improve regulatory readiness with built-in compliance
- Enhance data quality through validation at the point of entry
- Shorten database lock timelines for quicker close-out

Sciteline's Researcher Platform centralizes eSource data capture, streamlining how trial information is collected directly at the source. Key tools include eCOA for clinical outcomes, ePRO for patient-reported input, eConsent, and general data capture.

Key Features

Sciteline makes eSource practical and easy to adopt with:

- Study visit forms & reusable templates
- Drag-and-drop form builder (no coding required)
- QA-enabled review processes that review and approve forms before use
- Automated version control that tracks changes and rolls back if needed
- Study lifecycle management, keeping forms aligned with each study phase
- Real-time data validation triggers to reduce errors
- Secure, compliant, auditable workflows
- Remote monitoring access for sponsors and CROs
- PI review, annotation, and digital sign-off

These capabilities mean studies can **launch faster** with standardized, controlled, and reusable workflows.

EVENT HIGHLIGHTS

Digital Health Canada Manitoba Breakfast
September 16, 2025
Winnipeg, MB

At the inaugural Digital Health Canada Manitoba Breakfast, we celebrated 20 years of digital health leadership within the First Nations Health and Social Secretariat of Manitoba (FNHSSM)—a milestone marked alongside the 50th anniversary of Digital Health Canada.

Highlights included AI-bots that cut vaccine data entry time by 80% and Manitoba's immunization query service—the first of its kind in Canada and developed and deployed with First Nations. *The Manitoba Advantage* was clearly on display, with conversations reinforcing the province's leadership in digital sovereignty, interoperability, and positioning itself as a national testbed for scalable health innovations like virtual care through QDoc.

UPCOMING EVENTS

We're gearing up for some exciting conferences this September and October! If you'll be attending, let us know—we'd love to say hello. And if not, no worries, as we'll be sharing key takeaways in our next newsletters. Stay tuned!

ACT Annual Conference
September 25-26, 2025
Sydney, NS

Digital Health Canada Atlantic Regional MeetUp + Conference
October 8-9, 2025
Dartmouth, NS

Pan-Canadian Framework Promoting Clinical Research in Canada Summit (hosted by CRAC)
October 15, 2025
Toronto, ON

See how eSource fits into your clinical trial strategy.
